

Orb v1 pre-race forecast: Madrid 2026

Issued 2026-09-12T21:03:23+05:30 from sessions FP1, FP2, FP3. Lock built 2026-09-12T18:11:47. Forecast hash (lock v2) sha256:9123e2037901abc75738c639608d381c95cb13b1dacc5054a77903b2abac0b8d. This document is frozen before the race and scored after it.

Compound	Race degradation (s/lap of age)	90% band	Status	Clean Friday laps	Basis
SOFT	+0.068	-0.114 to +0.255	issued	46	cleaned Friday curve × season transfer factor
MEDIUM	+0.028	-0.013 to +0.088	withheld (fallback)	112	low-degradation fallback: median race degradation of the 13 withheld cases this season

Strategy on the central curve. S-M with stints [22, 34] over 56 laps; pit loss 21 s; compound offsets {"SOFT": 0.0, "MEDIUM": 0.6, "HARD": 1.8129999999999882} s (MEDIUM: practice value +1.20 s implausible, nominal Pirelli-range step; HARD: practice (3 drivers)). Low edge of the band: S-M [50, 6]; high edge: S-M-M [10, 22, 24]. Assumptions: linear curves, no safety car, no traffic.

Rules. min_practice_laps = 30, min_slope = 0.02, factor_rule = median of other weekends, applied only if >=3 exist and a majority sit within ±50% of it, fuel_prior_kg_per_lap = 1.1, fuel_s_per_kg = 0.03, traffic_max = 0.3, min_stint = 5

Integrity. JSON sha256 f1b9b8af83c6c9232f6372cd74947359935948cabf833a71f95e75b8cd0b4439; lock.json sha256 b2316b060b1535cc8f0e2e6c4df4cb5911727a889068e0f7c80012c60660800a; lock_v2.json sha256 e51dbb85c508dde76bd9ae29c777f0bda4c9c5d517f6a50caf0229b42a0b1fec. Scoring after the race uses the same estimator on race laps (race-derived pace-loss reference, all drivers) and is published whatever it says.
